# FROM THE CAVES, TO NAPOLEON, TO SUPER INGREDIENT

## A NEVER-ENDING EVOLUTION

<sup>1</sup>Global Industry Analysts, Inc, Gelatin a Global Strategic Business report, June 2018

# **DON'T KNOW HOW GELATIN IS PRODUCED? READ ON**

01

Gelatin is obtained through partial breakdown of collagen, a raw material found in the skin and bones of animals.

02

Depending on the raw material used and the characteristics required, gelatin can be produced either through an acid or alkaline treatment. After the hydrolysis stage, needed to make the collagen soluble, the next steps of the process are very similar; gelatin is extracted, sterilized, filtered and chilled. The result is a jelly noodle, which is then dried and ground into grains for storage.

03

A long and complex process which can take up to 3 months.

04

It's completely safe too. At Rousselot, our state-of-the-art production processes ensure that gelatin meets the highest standards across quality, safety and traceability. We also continuously look to expand and improve on these processes to consistently create products of the highest quality.

## **Did you know...**

that you can produce your own gelatin at home by boiling meat/ fish with bones and/or skin? The resulting stock will naturally form a jelly when cooled.

# SUSTAINABLE IS GELATIN'S MIDDLE NAME

**Did you  
know...**

that gelatin contributes to reducing food waste and to a circular economy model?

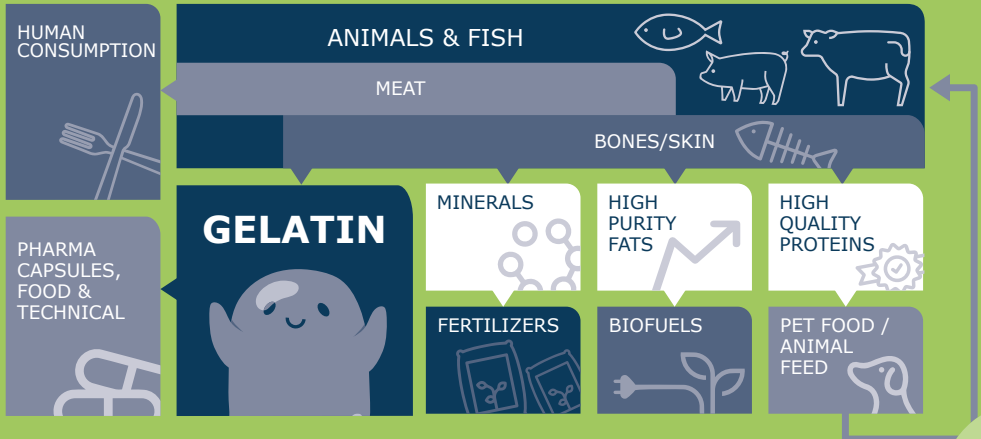

*Popularity for more natural products without additives is on the increase, and not only that; people are more concerned about the impact of food production on the environment than ever before.*

## HOW DOES GELATIN FIT IN? TWO WORDS: ZERO WASTE

Originating from the meat processing industry, gelatin allows full usage of the animals intended for human consumption, reducing waste and therefore contributing to a zero-waste economy.

Following production and refinement, its by-products are also put to good use, as high-quality fats and proteins.

Other upcycling includes that of solid waste, used as an organic fertilizer.

Put simply: thanks to gelatin, all parts of the animal are put to good use, just like old times.

# SAFETY ASSURED

*From its raw form to the finished product, gelatin is a safe ingredient. And here's why:*

## SAFE ORIGIN

### GELATIN NEED TO KNOW:

Not all bovine and fish gelatins are Halal and Kosher, so it's important to look for those that are certified by recognized religious bodies

# ALWAYS CLEAR ON QUALITY

*As the healthy eating trend keeps gaining momentum in the market, ingredients like gelatin help meet the clean/clear label guarantee that consumers expect.*

## Clean label<sup>1</sup>

## SHORT INGREDIENTS LIST

It's not just where they come from, consumers are also looking to recognize the ingredients in their products and see shorter ingredient lists. Gelatin, a traditional ingredient of natural origin helps to replace additives with e-numbers. More on this topic on the functionalities page 11.

## WHAT MAKES IT SO GOOD?

## WHAT CAN I MAKE USING GELATIN?

### Marshmallows as light as air with a melt in the mouth consistency

Perfect for innovation, our functional gelatins open up opportunity for exploration of new flavors, low-sugar or savory marshmallows.

### Chewy candies with the perfect chewability

Gelatin can help you achieve the best chewy candy texture, from soft to hard, and chewy to less chewy.

## FOR HEALTHIER CONFECTIONERY

Confectionery is more than just sweets however, as the demand for gummies increases in the nutraceutical market. Gelatin provides the perfect foundation for these functional gummies, offering space for additional health benefits, such as vitamins, minerals or collagen.

### GELATIN NEED TO KNOW:

Traditional gummies are produced with starch mogul machines. Although very practical, this production process represents a potential risk of cross-contamination between active principles in nutraceutical applications. However, thanks to the new Rousselot SiMoGel™ gelatin, the gelation of gummies can happen in a starch-free, completely hygienic environment. This innovation also allows for the creation of innovative shapes such as 3D gummies.

# DYNAMIC DAIRY

*Dairy with the most enjoyable smooth and creamy texture.*

**TELL ME MORE...**

**Did you know...**

that dairy manufacturers all across the world use gelatin to reduce the fat and sugar content of their products, while also improving the look, flavor and texture?

## MOUSSE

Ever wondered why mousse has such an airy, light texture? It's due to gelatin's foaming, stabilizing and water-binding properties, giving this desired effect.

## YOGURT

Looking to achieve a bright appearance and consistent texture without water separating and appearing on the top? Gelatin is widely used in yogurt products for its ability to bind ingredients and create a smooth end product.

## QUARK AND DESSERT CREAMS

Want to retain that smooth and silky texture in your dairy products? Gelatin's water-binding and texturizing properties allow for this and stability over time.

## ICE CREAM AND WATER ICES

Keep finding crystals forming in your iced products? Gelatin can prevent crystal growth over time, along with slowing the melting rate.

# GELATIN'S MOTTO?

## VARIETY IS EVERYTHING

*And it's not just sweets and dairy. Gelatin is used by manufacturers and chefs around the world to improve recipes. Below are just a few of its applications.*

### MEAT AND FISH LOVERS LISTEN UP

As a pure animal protein, gelatin is a natural complement to meat-based products, including cooked pressed ham, meat emulsions and canned meat products

### EVERYONE'S FAVORITE DESSERTS

Fast setting and transparent in color, gelatin is used extensively in water jellies and celebrated for its ability to enhance brightness

### LIKE WINE?

Gelatin has been used in the clarification or fining of wine since the Roman civilization. And it's not just wine, gelatin is used to reduce the cloudy quality in beer too. All without leaving any trace of gelatin in the finished drink

**Did you know...**

that cooking meat with the skin on is a great source of collagen?

# THOUGHT IT WAS JUST FOOD? THINK AGAIN

*Did you  
know...*

25% of capsules worldwide are sourced with Rousselot gelatin?

*When it comes to pharma and nutraceuticals, people are looking for delivery forms that are easy to swallow and ensure effective content release, so it's no wonder that soft gels and hard capsules are so popular. As demand also increases for clean label and natural ingredients, gelatin is the only excipient that adheres to the definition, with other excipients like HPMC and modified starch being the result of a chemical synthesis process and so classified as additives.*

## WHY USE GELATIN FOR HARD CAPSULES & SOFT GELS?

## COMBATING CHALLENGES

Gelatin is the go-to ingredient for producing clean label soft capsules, due to its functional capabilities and dissolution properties. But when working with specific fills in soft gel manufacturing, cross-linking issues/alteration of the gelatin can occur, negatively affecting the stability of the capsule and the release of its contents.

This is not the case anymore, as new Rousselot StabiCaps™ solutions are designed to reduce crosslinking and increase capsule stability.
